

For UI/UX design -> use Figma

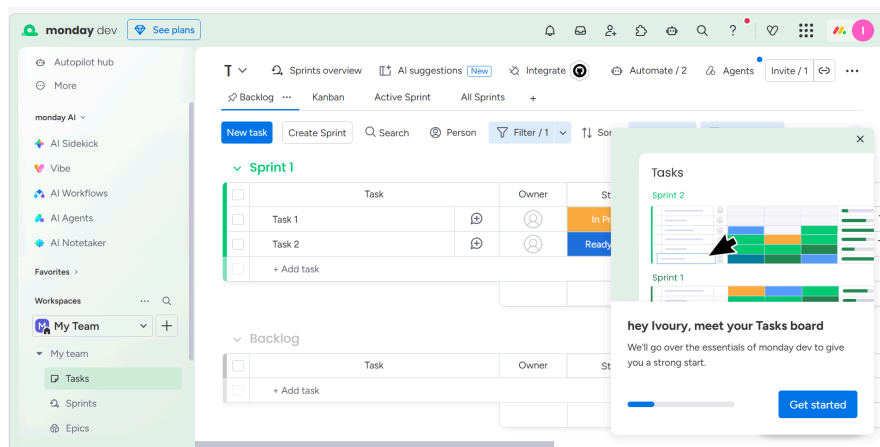

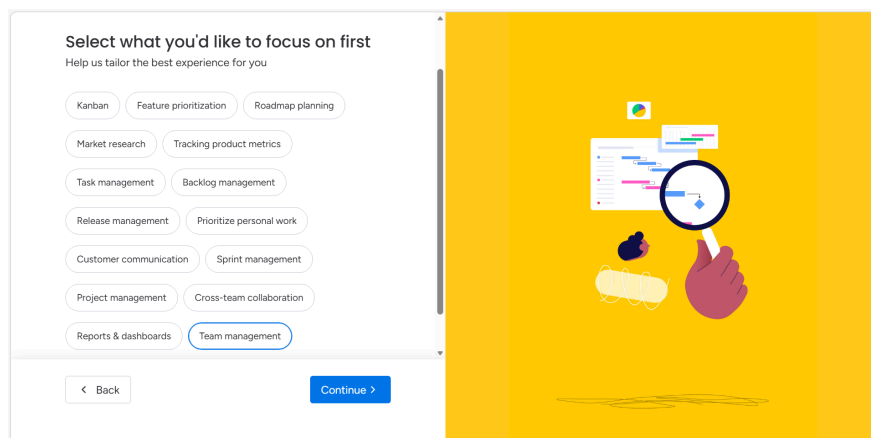

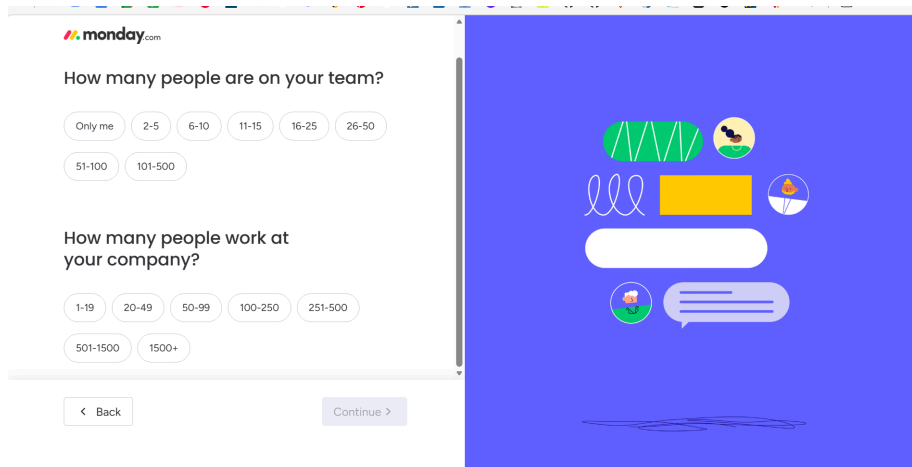

- Members: Owen, Jacky, Kaitlyn
- I like Notion's layout
 - A little messy though, I would prefer something less disorganized

My Research Doc:

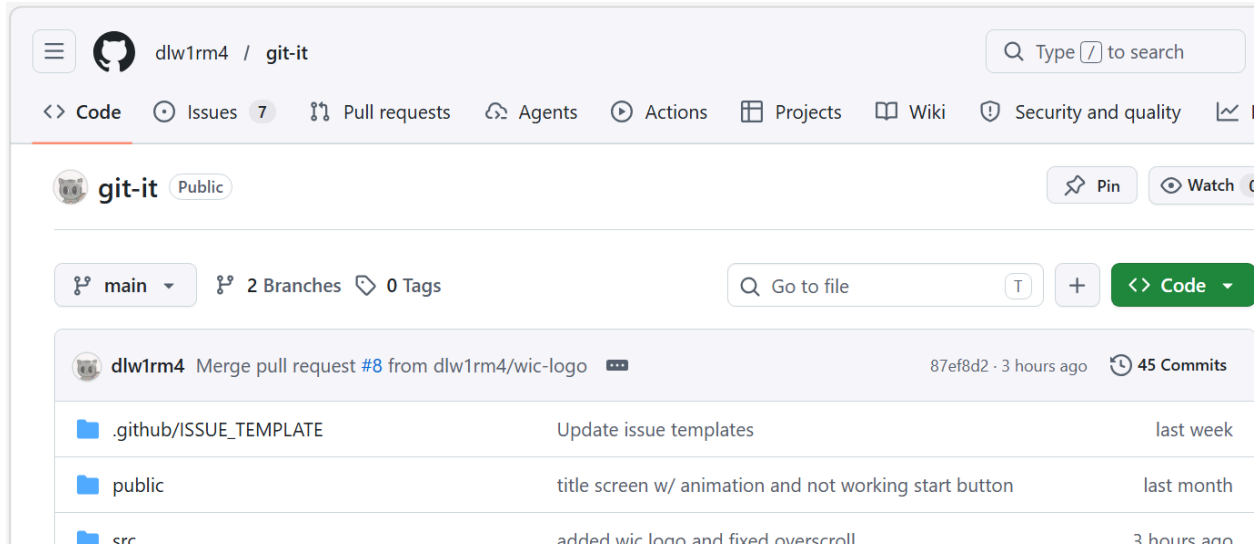

[Monday.com](https://www.monday.com)

- The dashboard is also quite messy, so having something easier to track will be better for teams
 - Graphic and UI design is my passion!
- Features:
 - Sprint tracker
 - Task manager (people responsible, status, priority, type, etc.)
 - Bugs queue
 - Backlog (tasks, user stories, features, bugs)
 - AI work agents
 - Workflows
 - Help menu

[GitHub.com](https://github.com)

- I don't know why but I really like the pull request and issue attachment feature
- Making different types of issues is cool

Other features that would be nice

- Syncing up everyone's schedule
 - When2Meet except more efficient lol
- 'Does someone need help' button
