

## **Research: Front-End Directions of *SE SitRep***

### 1. Steady (formerly Status Hero)

- Website: <https://runsteady.com>
- Core features:
  - Asynchronous daily check-ins
  - AI-generated team summaries
  - Blocker tracking
  - Team alignment support

### 2. Slack

- Slack: <https://slack.com>
- Core features:
  - Integration directly within chat channels
  - Lightweight and easy to use

### 3. Jira

- Website: <https://www.atlassian.com/software/jira>
- Core features:
  - Sprint planning
  - Issue tracking
  - Kanban and Scrum boards

### 4. Research conclusion

- Existing tools solve different pieces of the SE SitRep problem:
  - Steady: team check-ins and summaries

- Slack: communication and updates inside chat
- Jira: issue and sprint tracking

## **User Story**

As an introverted developer, I want an asynchronous platform to share my daily updates, blockers, and status without real-time or public communication, so that I can stay aligned with the team while minimizing direct social interaction and communication pressure.

## User Persona

- Name: Little Sam
- Role: International CS student / developer
- Personality: Introverted, responsible, prefers quiet work
- Background: Sam often works in team projects, but frequent meetings and public discussions make him feel tired.
- Goal: Stay updated and contribute to the team without too much direct communication.
- Pain Point: Real-time group communication can feel stressful and exhausting.
- Need: An asynchronous platform to share progress, blockers, and status privately or with low pressure.

Quote:

“I want to stay connected with my team, but I don’t want every update to require a meeting or public discussion.”

## AI Use Disclosure

**I used ChatGPT to help refine my ideas, as well as improve grammar and clarity. All original concepts and content were developed by me, and the AI was only used to polish the language and organization.**
